Subject: Annual Report 2010 – San Ramon Valley Recycled Water Project
DERWA
SWRCB Grant WRCP-3205-030 and Loans WRCP 3205-120 and 3205-110

Dear Mr. Badyal:

Enclosed please find the San Ramon Valley Recycled Water Project Annual Report for the 2010 calendar year. The report has been prepared in accordance with provisions of the grant and loan agreements, Exhibit A, Section 15.

If you have any questions or need additional information please contact me at (925) 875-2234 or by email at bewley@dsrsd.com.

Sincerely,

James B. Bewley
Authority Manager

Enclosure

San Ramon Valley Recycled Water Program 2010 Annual Progress Report

Dublin San Ramon Services District • East Bay Municipal Utility District Recycled Water Authority (DERWA)

Program Description

The San Ramon Valley Recycled Water Program (SRVRWP) is a multi-phase project, created to supply recycled water to the Dublin San Ramon Services District (DSRSD) and East Bay Municipal Utility District (EBMUD) to be used for landscape irrigation. The program is administered by DERWA, a Joint Powers Authority formed in 1995 by Dublin San Ramon Services District and East Bay Municipal Utility District.

The current recycled water system includes the treatment plants, pump stations, transmission pipelines, storage reservoirs, and local distribution pipelines. The distribution pipelines are owned and operated by DSRSD and EBMUD in their respective service areas. The treatment plants are owned and operated by DSRSD. Seventeen miles of 16 to 36 inch diameter "backbone" transmission pipeline, two storage reservoirs, and three pump stations are owned by DERWA, operated by DSRSD. DSRSD owns and operates two distribution pump stations and storage reservoirs in the Upper East Dublin and Upper Dougherty Valley service areas. EBMUD has completed the construction of one reservoir and the design of distribution pipelines to expand recycled water service north in San Ramon and Danville. The first two phases of distribution pipeline construction contracts were awarded in 2010, with additional pipeline phases, and two pump stations planned for later years.

DERWA System Facilities

	Owner	Operator	Size	Status
Sand Filter/UV Treatment Plant	DSRSD	DSRSD	9.7 MGD (peak flow)	In Service
Microfilter/UV Treatment Plant	DSRSD	DSRSD	3.0 MGD (peak flow)	Stand-by Service
PS 1	DSRSD	DSRSD	16.5 MGD	In Service
Backbone Transmission	DERWA	DSRSD	16" to 36" 18.9 Miles	In Service
PSR20	DSRSD	DSRSD	1.7 MGD	In Service
PS R200A	DERWA	DSRSD	3.2 MGD	In Service
PS R200B	DERWA	DSRSD	5.8 MGD	In Service
PS R300	EBMUD	DSRSD	0.7 MGD	In Service

PS R4000	EBMUD	EBMUD	1.6 MGD	Future
Tank R20	DSRSD	DSRSD	1.5 MG	In Service
Tank R100	DERWA	DSRSD	4.5 MG	In Service
Tank R200	DERWA	DSRSD	4.5 MG	In Service
Tank R300	DSRSD	DSRSD	0.45 MG	In Service
Tank R3000	EBMUD	EBMUD	1.8 MG	Completed – Not in Service
DSRSD Distribution	DSRSD	DSRSD	55.2 Miles	In Service
EBMUD Distribution	EBMUD	EBMUD	5.7 Miles	In Service
EBMUD Distribution	EBMUD	EBMUD	7.0 Miles	Under Construction

The transmission and storage system has a design capacity of 6,385 acre-ft/yr (5.7 MGD average annual flow) with a maximum day capacity of 16.5 MG. The Sand Filter/UV treatment plant Phase 1 Peak Day design capacity is 9.7 MG. The Microfilter/UV treatment plant with a design flow of 3.0 MGD is primarily used during low flow periods and can be used to supplement the SFUV plant if needed. The system map is included as Attachment A.

2010 Season Overview

This report covers the operation of the facilities from January 1, 2010 through December 31, 2010.

During the period a total of 2,174 acre-feet (708 million gallons) of recycled water was produced and distributed to DSRSD and EBMUD customers. Of this amount, DSRSD customers used 1,714 acre-feet (558 million gallons), and EBMUD customers used 413 acre-feet (135 million gallons). Recycled water demands peaked on June 28 with a maximum flow of 5.53 MG. The total cost to operate the system during this reporting period was \$1,114,330, averaging \$513 per acre-foot delivered. The budget for FY 2010/11¹ anticipates deliveries totaling 2,830 acre-feet (992 million gallons) at a unit cost of \$544 per acre-foot, \$370 per acre-foot for treatment and \$174 per acre-ft for transmission & storage.

During the 2010 calendar year full compliance with the RWQCB permit was maintained. Recycled water production and demand is summarized in Table 1, Operations and Maintenance costs are summarized in Table 2, Treatment costs are summarized in Table 3, and Transmission/Storage costs are summarized in Table 4.

2010 Customers

As of December 2010 there were 184 customer accounts serving 256 irrigation sites in the DSRSD² service area, and 37 irrigation sites in the EMBUD³ service area. The lists of individual sites are included as Attachments B and C.

All of the recycled water delivered was used for landscape irrigation and offset the use of potable water that would have been used without this program.

2010 Season Operational Highlights

The following are the 2010 season highlights:

January 2010: During the month staff negotiated with Wedeco, the manufacturer of the SF-UV system, to resolve reliability issues related to the lamps themselves. After four irrigation seasons the Wedeco UV system needed a substantial replacement of bulbs and wiper assemblies to maintain optimum performance. During the previous year frequent lamp failures significantly impacted operational flexibility. To compensate for the problems, the operating staff resorted to leaving the SF-UV lamps on continuously, which increased O&M costs for electricity. Wedeco discovered a flaw in the design of the UV lamps that was causing the premature failure of the original UV lamps. Wedeco agreed to replace all 600 lamps in Channel No. 1 at no cost to DERWA. WEDECO also agreed to provide replacement lamps for Channel No. 2 at a discounted price.

March 2010: The Recycled Water Program Annual Report for the 2009 Irrigation Season was submitted to the Regional Water Quality Control Board (RWQCB) and the California Department of Public Health. The submission of the report was done in compliance with the reporting requirements of the RWQCB General Water Reuse Order 96-011 and applicable provisions of the California Code of Regulations Title 22.

On March 25 staff from DSRSD and EBMUD participated in an all-day communications roundtable exercise designed to improve overall responses to various problems and issues that might arise. The exercise also provided participants with an update on recycled water system construction and growth projections.

April 2010: On April 7 staff completed the annual draining and refilling of reservoirs R100 and R200. The reservoirs were drained to remove recycled water that had nitrified during the winter months, and then the reservoirs were refilled with fresh

recycled water containing a higher than normal chlorine residual. Some portions of the DERWA backbone piping were inadvertently dewatered during this procedure, which staff tries to avoid if possible. A total of 1.39 million gallons of recycled water were drained back to the Wastewater Treatment Plant. The timing for the procedure was selected so that the draining and refilling occurred with minimal inconvenience or interruption of service to customers.

Staff completed the replacement of all of the lamps in Channel No. 1 on the Wedeco UV system, as previously noted. The work included the replacement of 600 UV lamps in Channel No. 1, and the replacement of lamps in 3 of the 5 banks in Channel No. 2. Wedeco service technicians provided service support during the work. Staff also repaired or replaced a number of the lamp wiper assemblies.

May 2010: On May 1 the SF-UV system was placed in operation due to warmer weather and increasing seasonal demands. The MF-UV system was turned off and placed in standby.

Bridges Golf Course advised staff that a lab analysis they had performed on the recycled water they were receiving showed a pH of 8.2, and they expressed concern that the pH level could be causing them to use more nitrogen on the golf course. DSRSD began working on a formal response to this issue.

June 2010: Recycled water demand peaked on June 28 when a daily flow of 5.53 MGD was delivered to customers, setting a record which topped the previous record of 5.34 MGD set on June 29 the previous year.

August 2010: On August 8 the Chevron corporate campus at Bishop Ranch began using recycled water for irrigation. Chevron estimated their annual usage would be about 33 MG of recycled water. Staff traded correspondence with Chevron concerning their questions about possibly using recycled water for cooling tower makeup.

September 2010: Chevron began experiencing problems with their pressure regulating valve (PRV), which allowed the recycled water pressure inside their facility to creep up over time and match the upstream pressure, which resulted in damage to some of their piping. At the request of EBMUD, DSRSD staff provided assistance working with the manufacturer of the PRV and advice to Chevron in determining a resolution to their problem.

October 2010: On October 29 recycled water demands decreased to the point where the SF-UV system was removed from service and placed in standby. The MF-UV system was placed in service for the winter, and was only operated on an as-needed basis to provide water to meet customer demands.

JDH Corrosion Consultants completed the annual survey of the DERWA Iron Horse Trail stray voltage mitigation system, and determined that the system was operating properly. JDH noted some concern regarding damage to test stations from grass mowing operations that needed to be addressed.

November 2010: DERWA accepted ownership of Pump Station R200A from the US Army Corps of Engineers.

State and Federal Funding

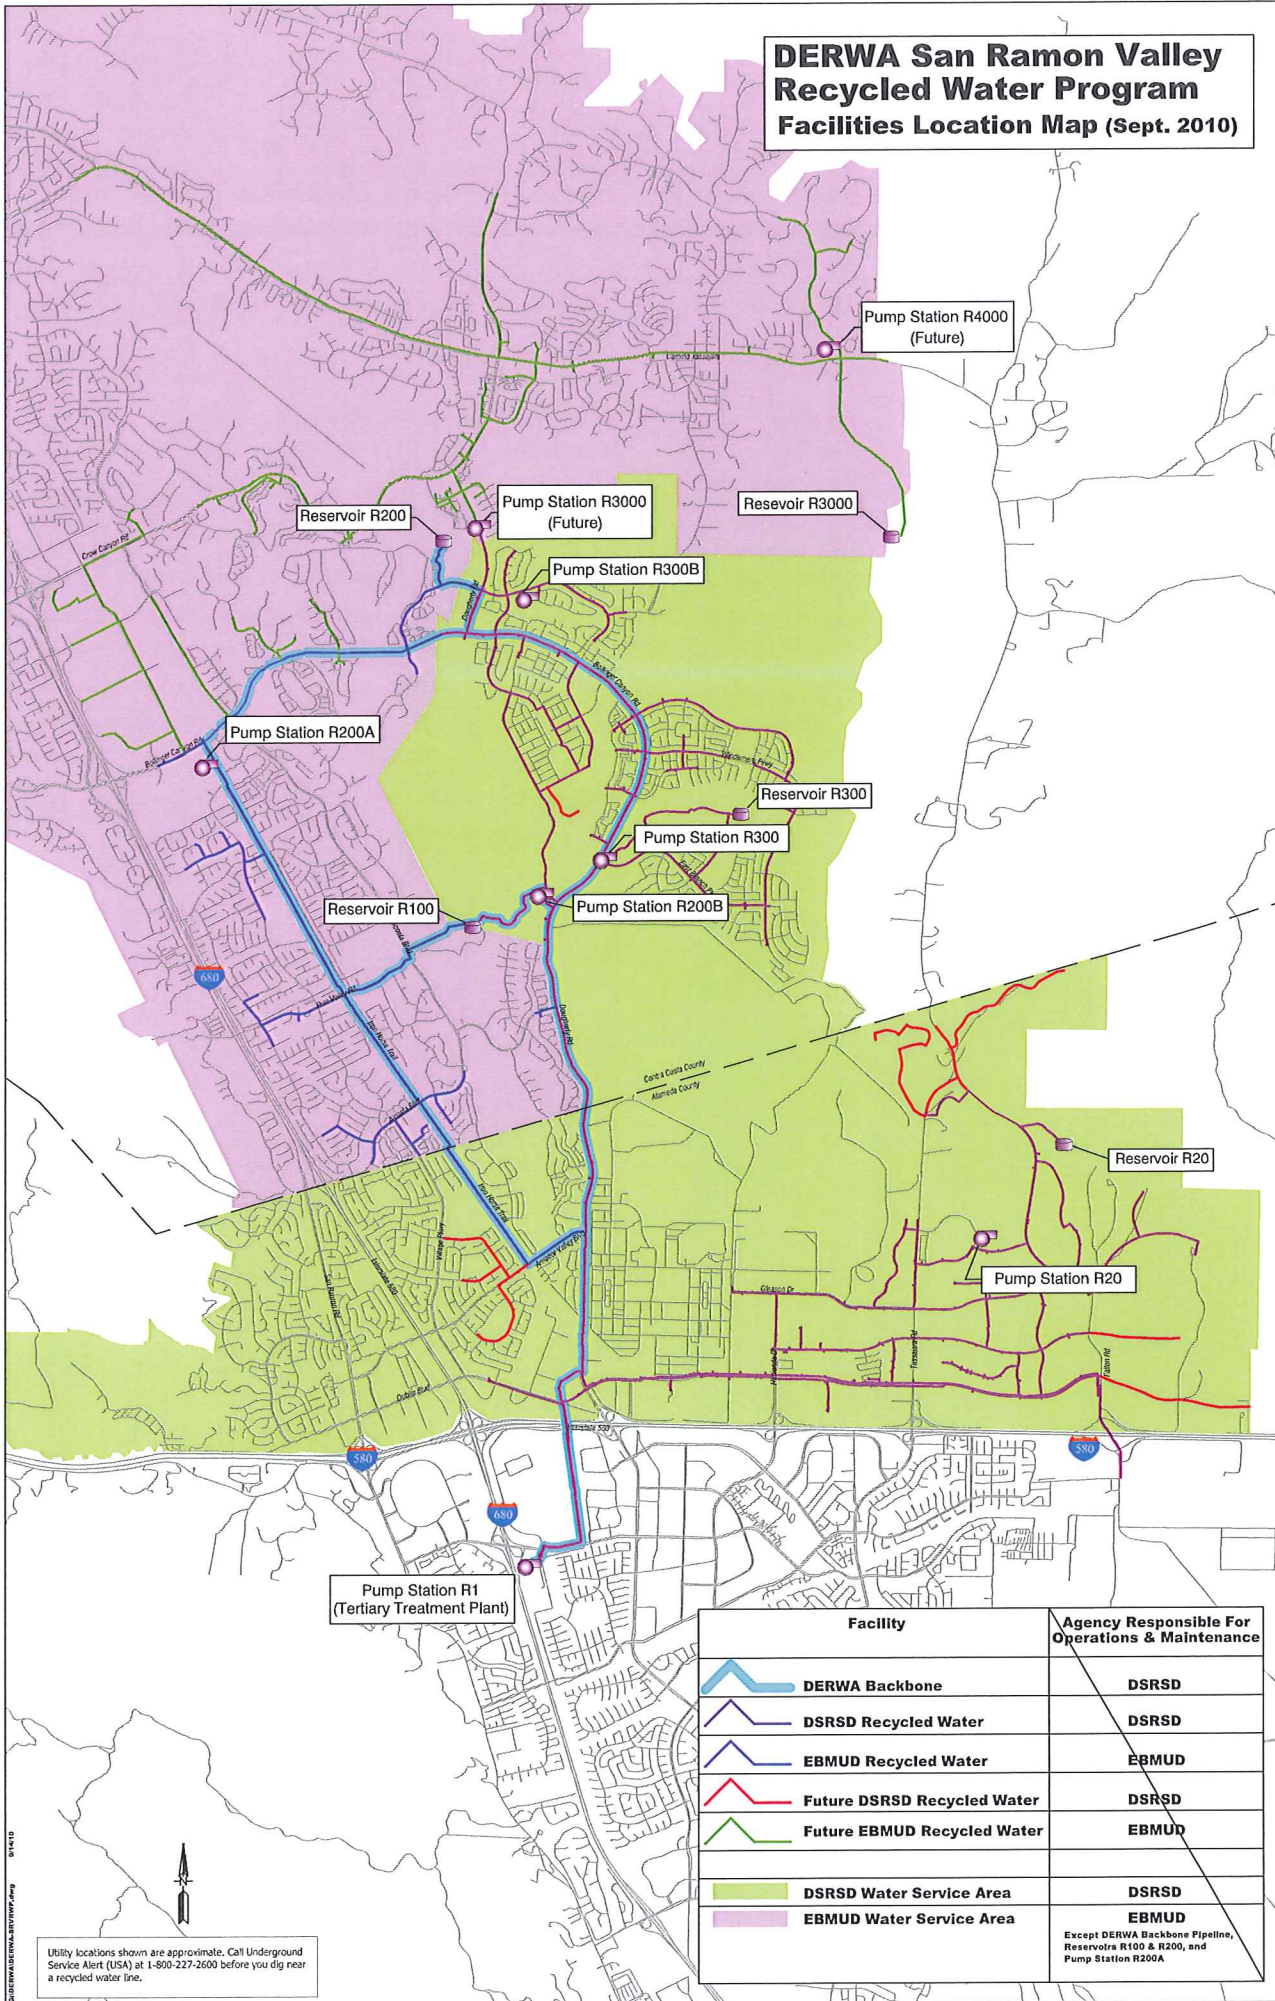

The final state grant and loan payment requests for this project were submitted in April 2007. The final grant payment in the amount of \$202,747 was made May 18, 2007. Final loan payments of \$619,763 and \$1,065,520 were made October 30 and November 7, 2007, respectively. The total grant amount received was \$5,000,000 and the total loan amounts received was \$24,678,651. The construction cost of the grant & loan eligible facilities were \$31,917,837.

Federal funds in the amount of \$15,000,000 for design and construction assistance for the San Ramon Valley Recycled Water Project were authorized by Section 219(f)(42) of the Water Resources Development Act (WRDA) of 1992, Public Law 102-580. Through December 31, 2010 Congress has appropriated \$14,541,500⁴ for the design and construction of the Pump Station R200A, Transmission Pipeline Segment IH and additions to the EBMUD distribution system. The pump station and transmission pipelines completed in summer of 2010 completes the DERWA Phase 1 treatment, transmission, and storage projects. EBMUD has completed the design of distribution pipelines serving areas in San Ramon and Danville to the north. WRDA funding supports the first two phases of the EBMUD distribution pipeline project which are now under construction and expected to be completed by summer 2011.
