

SAN RAMON VALLEY RECYCLED WATER PROGRAM

FACT SHEET

CONSTRUCTION NEXT STEPS

Phase II of the SRVRWP includes a new underground pump station and 1.25 mile pipeline located in San Ramon, serving customers in the northern San Ramon area. The pump station will be located in Bishop Ranch and the pipeline will extend on Bollinger Canyon Road from the Iron Horse Trail east to Chanterella Drive. Construction is anticipated to start in summer/fall 2007 and will take approximately one year to complete.

More information will be provided to those likely to be impacted by this work as construction approaches.

SAN RAMON VALLEY RECYCLED WATER PROGRAM

FACT SHEET

About the Program

The San Ramon Valley Recycled Water Program (SRVRWP) is jointly sponsored by the Dublin San Ramon Services District (DSRSD) and the East Bay Municipal Utility District (EBMUD). The SRVRWP began supplying recycled water in early 2006 when construction of the Program's first phase was completed. DSRSD supplies recycled water to portions of Dublin and the Dougherty Valley. EBMUD serves recycled water to portions of San Ramon. In future phases, EBMUD also will serve recycled water to areas within Blackhawk and Danville.

This recycled water project serves large irrigation customers including golf courses, parks, greenbelts, roadway medians, schools, office complexes, and landscaping in common planted areas within homeowner associations, from pipelines connected to the main SRVRWP transmission pipeline. The SRVRWP's recycled water is not intended to serve individual single-family homes.

The SRVRWP is designed to provide:

- up to 3,696 acre feet* per year of recycled water to DSRSD
- up to 2,688 acre feet* per year of recycled water to EBMUD

Benefits & Uses of Recycled Water

Recycled water benefits communities. Just as we do with paper, plastic, glass and cans, water can be reused instead of being thrown away. Recycled water can be safely used for many non-drinking purposes including landscape irrigation, habitat restoration, and various commercial and industrial operations.

The benefits of using recycled water include:

- Providing a drought-resistant water supply.
- Conserving drinking water throughout the San Ramon Valley that would otherwise be used for landscape irrigation.
- Reducing the cost and amount of treated wastewater that is discharged into the San Francisco Bay.
- Protecting public and private investments in parks and landscaping.
- Sustaining and strengthening our regional economy with a reliable water supply.

**An acre-foot of water is equivalent to the amount of water it takes to cover a football field to a depth of one foot.*

Source of Water & Description of Treatment

The SRVRWP uses recycled water produced at the newly completed state-of-the-art tertiary treatment facility located adjacent to the DSRSD Regional Wastewater Treatment Facility. The tertiary treatment plant treats effluent to meet the unrestricted use requirements described in the California Department of Health Services' Title 22 standards. Tertiary treatment processes include filtration and extra disinfection, which for the SRVRWP include sand filtration to remove particulate matter and intense ultraviolet disinfection to destroy inactive bacteria, viruses, and other pathogens such as cryptosporidium.

Dublin Sports Grounds

Use of Purple in Recycled Water Systems

Guidelines set by the California Department of Health Services mandate that recycled water facilities be clearly distinguishable from the drinking water system. To help accomplish this, devices used in the recycled water system including pipes, sprinkler heads, and valve box covers, are purple colored or tagged and labeled with the words "Recycled Water - Do Not Drink."

Clear and prominent signage also is required throughout irrigation areas to ensure the public can easily determine where recycled water is used to irrigate turf and other landscaping.

Phase 1 Customers

The SRVRWP currently serves recycled water to more than 170 locations in Dublin and San Ramon. Customers include the cities of Dublin and San Ramon, the Dublin Unified School District, the San Ramon Valley Unified School District, Chevron Corporation World Headquarters, Dublin Ranch Golf Club and the Bridges Golf Club at Gale Ranch.
